

Equipment Operation Audit

Increase productivity, limit downtime and drive profitability with an equipment and system operation audit performed by experienced, knowledgeable CMD Technicians. Your audit will be customized to your CMD bag making, or CMD/Waterline pouch making equipment. On the energy side of our business, audits are offered for most natural gas compression systems.

Equipment audits are customized to focus on your specific equipment in your production environment and a goal to identify areas to improve performance and efficiency. The audit profile includes:

- ✓ **Review of maintenance records**
- ✓ **Observation of the equipment while operating**
- ✓ **Recommendation on setting adjustments to optimize performance**
- ✓ **Scheduled maintenance recommendations**
- ✓ **On-hand replacement parts recommendation to minimize unplanned downtime**
- ✓ **Each audit visit culminates in a verbal debrief and a written report**
- ✓ **All equipment audits are based on the owner's manual provided with the machine(s) or OEM documented maintenance recommendations**
- ✓ **Standard audit length is Tuesday through Thursday but will depend on how many and which types of machines and modules will be included.**

Call 1-800-626-0210 to schedule your audit or request more information.
